A claimed method of diagnosing a Moraxella infection involves identifying a BASBIII polypeptide or antibody. A claimed therapeutic composition useful in treating humans with M. catarrhalis infection comprises at least 1 antibody directed against a BASBIII polypeptide. BASBIII polypeptides also have utility in raising specific antibodies, and in screening for

                                                                                                       ABU35462;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention provides the protein and coding sequences of proteins from Moraxella catarhalis. These can be used to produce vaccines which protect against M. catarhalis infection, which can otitis media, respiratory infection, sinusitus, and pneumonia. The present sequence is a protein of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Moraxella polypeptide and polynucleotides useful as vaccine for immunizing a host e.g., humans against disease e.g. otitis media, pneumonia, caused by infection of the bacteria.

CC nucleic acid; (2) a host cell containing the vector; (3) an isolated CC polypeptide or its fragment whose expression is inhibited by the CC antisense nucleic acid; (4) an antibody capable of specifically binding CC antisense nucleic acid; (4) an antibody capable of specifically binding CC proliferation or the activity of a gene in an operon required for CC proliferation; (7) identifying a compound that infiltences the activity of the gene product or that has an activity against a biological pathway of contentifying a gene required for cellular proliferation or the biological pathway in which a proliferation-required gene or its gene product lies or a gene on which the test compound that inhibits proliferation of an CC organism acts; (9) manufacturing an antibiotic; (10) profiling a cc compound's activity; (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the sexent CC to which each of the strains is present in a culture or collection of constitution of an organism. The antisense nucleic acids are useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation in cells other than S. aureus, S. typhimurium, CK. pneumoniae or P. aeruginosa. The present sequence is encoded by one of the target prokaryotic essential genes. Note: The sequence data for this content did not form part of the printed specification, but was obtained or in electronic format directly from WIPO at

The sequences can be used in the production of a vaccine to protect against, and in the diagnosis of, H. influenzae infection, which can lead to cittis media, sinusitis, bronchitis, pneumonia, meningitis and bacteraemia. The present sequence is a protein of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Haemophilus influenzae infection; BVH-NTHI1; otitis media; BVH-NTHI2; sinusitis; bronchitis; pneumonia; meningitis; bacteraemia; BVH-NTHI3; BVH-NTHI3; BVH-NTHI5; BVH-NTHI5; BVH-NTHI5; BVH-NTHI5; BVH-NTHI5; BVH-NTHI17; BVH-NTHI8; BVH-NTHI19; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NTHI1; BVH-NTHI11; BVH-NTHI11; BVH-NTHI11; BVH-NT

                                                                                                                                                              development. The antisense nucleic acids can also be used to identify proteins used in proliferation, to express these proteins, and to obtain antibodies capable of binding to the expressed proteins. The proteins can be used to screen compounds in rational drug discovery programmes. The antisense nucleic acid sequence is also useful to screen for homologous nucleic acids which are required for cell proliferation in a wide variety of organisms. The present sequence represents an essential prokaryotic cellular proliferation protein. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                 The invention relates to antisense inhibitors of genes essential to prokaryotic cellular proliferation, their use in identifying the genes, their use in the discovery of novel antibiotics, the essential genes themselves and the encoded proteins. The prokaryotes used are Escherichia coli, Staphylococcus aureus, Salmonella typhi, Klebsiella pneumoniae, Pseudomonas aeruginosa and Enterococcus faecalis. The invention is also useful for the identification of potential new targets for antibiotic development who artification of potential new targets for antibiotic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           WPI; 2001-611495/70.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present sequence is the protein sequence for the BASB202 protein of CC nontypeable Haemophilus influenzae (NTHAI) strain 3224A (ATCC PT-1816) CC isolated from an otitis media patient in the USA, NTHi strain 3219C CC isolated from an otitis media patient in the USA, NTHI strain 3219C CC isolated from a meningitis patient in the Netherlands, and NTHI strain 60956 CC AB40164, a carrier strain from the Netherlands. Variability analysis of CC EASB202 protein among NTHI strains revealed 99-100% sequence identity. CC The invention provides BASB202 polypeptides and polynucleotides, vectors, host cells, and methods for producing the polypeptides by recombinant CC methods. Claimed vaccine compositions comprise a BASB202 polypeptide or complynucleotide. A claimed method of diagnosing NTHI infection involves CC identifying a BASB202 polypeptide or an antibody that is immunospecific cfor the polypeptide. A claimed therapeutic composition useful for treating humans with NTHI diseases include otitis media, pneumonia, CC sinusitis, nosocomial infections, invasive disease, chronic otitis media cumulation in the middle ear, anditory nerve cd amage, delayed speech learning, infection of the upper respiratory verve call epitopes from BASB202 may also be useful in vaccine compositions
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match

identity. The invention provides BASB202 polypeptides and polymurleotides, vectors, host cells, and methods for producing the polymurleotides by recombinant methods. Claimed vaccine compositions by recombinant methods. Claimed vaccine compositions of comprise a BASB202 polypeptide or polymurleotide. A claimed method of diagnosing NTHi infection involves identifying a BASB202 polypeptide or an antibody that is immunospecific for the polypeptide. A claimed therapeutic composition useful for treating humans with NTHi disease comprises an antibody directed against a BASB202 polypeptide. NTHi CC diseases include otitis media, pneumonia, sinusitis, noscomial comprises include otitis media, pneumonia, sinusitis, noscomial compositions, invasive disease, chronic otitis media with hearing loss, fluid accumulation in the middle ear, auditory nerve damage, delayed composition of the middle ear, auditory rerve the disease compositions of the upper respiratory tract, and compositions from BASB202 may also be useful in vaccine compositions
                                                                                                                                                                                                          The present sequence is the protein sequence for the BASB202 protein o nontypeable Haemophilus influenzae (NTHi) strain 27W116791N1 isolated from a cystic fibrosis patient in Denmark. Variability analysis of BASB202 protein among different NTHi strains revealed 99-100% sequence
                                                                                                                                                                                                                                                                                                                   New isolated BASB202 polypeptide of nontypeable Haemophilus influenzae useful for diagnosing a disease and in generating an immune response in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Region

cc encoding a polypeptide whose expression is inhibited by the antisense concleic acid; (2) a host cell containing the vector; (3) an isolated copyeptide or its fragment whose expression is inhibited by the antisense control of the polypeptide or its fragment whose expression is inhibited by the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular proliferation or the activity of a gene in an operon required for proliferation, (7) identifying a compound that influences the activity of identifying a gene product or that has an activity against a biological pathway crequired for proliferation, or that inhibits cellular proliferation or the biological pathway in which a proliferation-required gene or its gene product lies or a gene on which the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound's activity; (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent to which each of the strains is present in a culture or collection of strains; or (13) identifying the target of a compound that inhibits the proliferation of an organism. The antisense nucleic acids are useful for identifying proteins or screening for homologous nucleic acids required correquired for proliferation in cells other than S. aureus, S. typhimurium,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              06-SEP-2001;

                                                     The present sequence is a potential T-helper cell epitope of the BASB202 protein of nontypeable Haemophilus influenzae (NTHi). It corresponds to amino acid residues 107-126 of the BASB202 sequences given in ABB76073 and ABB76074. T-helper cell epitopes are peptides bound to human leukocyte antigen (HIA) class II molecules and recognised by T-helper cells. Peptides comprising BASB202 T-cell epitopes (see ABB76090-99) can be useful (preferably when conjugated to a peptide, polypeptide or polypaccharide) in a vaccine composition for the prevention of NTHi-related diseases, such as outlis media, pneumonia, sinusitis, nosocomial infections, invasive disease, chronic otitis media with hearing loss, fluid accumulation in the middle ear, auditory nerve damage, delayed inflammation of the middle ear
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New isolated BASB202 polypeptide of nontypeable Haemophilus influenzae useful for diagnosing a disease and in generating an immune response in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               BASB202; NTH1; infection; vaccine; genetic immunisation; audito antiinflammatory; antibacterial; immunostimulant; otitis media; T lymphocyte; epitope.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  K. pneumoniae or P. aeruginosa. The present sequence is encoded by one of the target prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              WPI; 2002-383180/41
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Example 13; Page 72;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      an animal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     19-SEP-2000; 2000GB-00022992

CC the 6213 antisense sequences given in the specification where expression CC (1) a vector comprising a promocroprably linked to the nucleic acid inhibits proliferation of a cell. Also included are: CC (1) a vector comprising a promocroprably linked to the nucleic acid cencoding a polypeptide whose expression is inhibited by the antisense CC nucleic acid; (2) a host cell containing the vector; (3) an isolated CC polypeptide or its fragment whose expression is inhibited by the activation or the activativy of agends of specifically binding CC proliferation, (7) identifying a compound that influences the activity of the gene product or that has an activity against a biological pathway (2) identifying a gene required for proliferation, or that inhibits cellular proliferation; (8) centifying a gene required for cellular proliferation or the biological pathway (2) required for proliferation, or that inhibits cellular proliferation; (8) compound that inhibits proliferation of an agene on which the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound's activity; (11) a culture comprising strains in which the gene compound's activity; (11) a culture comprising strains in which the gene compound's activity; (11) a culture comprising strains in which the gene compound's activity; (11) a culture comprising strains in which the gene compound's activity; (11) a culture compound that inhibits the gene compound that inhibits the strains; or (13) identifying the target of a compound that inhibits the compound that inhibits the compound that inhibits the compound that inhibits the compound compound that inhibits the compound compound that inhibits the compound compound that inhibits the compound compound that inhibits the compound compound compound that inhibits the compound compound compound compound compound that inhibits the compound compound compound compound compound compound compound compound compound compound compound compound compound compound compound
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ₽.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                21-MAR-2001; 2001US-00815242.

New isolated BASB202 polypeptide of nontypeable Haemophilus influenzae useful for diagnosing a disease and in generating an immune response in

Example 13; Page 72; 90pp; English

The present sequence is a potential T-helper cell epitope of the BASB202 protein of nontypeable Haemophilus influenzae (NTHi). It corresponds to amino acid residues 150-169 of the BASB202 sequences given in ABB76073 and ABB76074. T-helper cell epitopes are peptides bound to human leukocyte antigen (HLA) class II molecules and recognised by T-helper cells. Peptides comprising BASB202 T-cell epitopes (see ABB76090-99) can be useful (preferably when conjugated to a peptide, polypeptide or polysaccharide) in a vaccine composition for the prevention of NTHirelated diseases, such as otitis media, pneumonia, sinusitis, nosocomial infections, invasive disease, chronic otitis media with hearing loss, fluid accumulation in the middle ear, auditory nerve damage, delayed speech learning, infection of the upper respiratory tract, and

New antisense nucleic acids, useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs.

Claim 25; SEQ ID NO 52838; 1766pp; English.

The invention relates to an isolated nucleic acid comprising any one of the 5213 antisense sequences given in the specification where expression (c) of the nucleic acid inhibits proliferation of a cell. Also included are: (1) a vector comprising a promoter operably linked to the nucleic acid concleic acid; (2) a host cell containing the vector; (3) an isolated converses on is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide or its fragment whose expression is inhibited by the containing the vector; (3) an isolated converses on the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular proliferation, (7) identifying a compound that influences the activity of the gene product or that has an activity against a biological pathway in which a proliferation, or that inhibits cellular proliferation or the dispathway in which a proliferation activity against a biological pathway in which a proliferation required gene or its gene product lies or a gene on which the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound that inhibits proliferation of the strains is present in a culture or collection of the strains; or (13) identifying the target of a compound that inhibits the gene product is overexpressed of underexpressed; (12) determining the extent to which each of the strains is present in a culture or collection of the strains; or screening for homologous nucleic acids required for proliferation to isolate candidate molecules for rational conditions. The antisense nucleic acids required conditions of screening for homologous nucleic acids required to the proliferation in cells other than S. aureus, S. typhimurium, conditions of the strain of the printed specification, but was obtained in electronic format directly from MIPO at
